

Smoke Pockets

- Smoke pockets contain the sides of the curtain to reduce the passage of smoke and house the curtain guides
- Pockets consist of a 6" (152 mm) or 8" (203 mm) deep "Z" channel and 18" (457 mm) wide plates, all formed from 1/4" (6 mm) steel plate in 5' (1524 mm) and 10' (3048 mm) lengths; the removable 18" (457 mm) plates make smoke pocket and curtain installation faster and simpler than one piece designs
- 6" (152 mm) pockets are used with most straight lift curtains; 8" (203 mm) deep pockets are used with brail fire curtains
- All connections are bolted for serviceability
- Sections anchor to the building with 1/2" (13 mm) bolts or anchors on 4' (1219 mm) centers
- Pockets with guide tracks are used for fire curtains with 016-370 roller guides
- Three-year warranty against defects in materials or workmanship is provided on all J.R. Clancy equipment, additional warranty information is available at jrclancy.com
