

# VANTIS™ PENDANT CONTROLLER

## Setting the Stage Has Never Been Easier

The new Vantis Pendant Controller offers simple control of up to eight machines. Each machine can be programmed with up to six targets including upper, lower and four intermediate targets. Selection of multiple hoists or other machine types is easy as well as the ability to move them to a pre-set position together. Variable speed control of a single machine lets you use this controller on drapery or scenery sets during production.

## Intuitive Touchscreen Interface and Programming

The 3.5" (89 mm) color touchscreen provides real-time feedback on hoist status. The intuitive interface makes programming targets, configuring load sensing and adjusting speed incredibly simple. A "hold-to-run" go button ensures safe operation.

## Portability

The Vantis Pendant Controller comes with a 30' (9.1 m) cord enabling you to move around the stage and see the objects you are moving. Multiple connection points are available for remotely located equipment.

## Key Features

- Up to eight machines
- Variable speed control of a single machine
- Up to six targets per machine; four user recordable
- Safe and easy operation of travelers and overhead hoists
- Ease of use/interface
- Recordable targets & axes selection
- Permissions are tailored to each user via pin login
- No commissioning required

## Important Safety Features

- Emergency stop
- Password protection to allow access and recording capabilities only to authorized users
- Load sensing capability
- Automatic alarms if an error or fault is detected
- Illuminated GO button
- Hold-to-run function requires the operator to be at the controller when scenery is moving
