

Multiple Preset Control for Individual Hoists

The SceneControl® Pendant is the perfect controller when you need accurate, repeatable positioning for battens that raise and lower equipment or curtains. Use this single-axis preset controller for fixed or variable speed scenery battens, a house curtain, a backdrop, electronics or acoustic shell ceilings, that always trim at the same level. Set up to eight presets – soft upper, soft lower, and six intermediate targets—and run your motorized hoist with confidence it will always return to the right place.

Touch-screen Capability for Quick Programming

With a 240 x 180 backlit graphic LCD display, the SceneControl Pendant lets you set a batten's limits and presets quickly and easily. Follow the onscreen prompts to set the target and speed of a variable speed hoist. Use the GO button to raise or lower the batten to its target position.

- Choose a controller with 1, 4 or 8 axes.
- Portable pendant allows the operator to watch the batten move from any point backstage (with proper receptacle locations).
- See the batten's position, target, and status on the display.
- When not in use, the pendant can be hung on the wall or stored in an optional storage case.

Scalable Control for Your Stage

One day your production capabilities may expand – and the SceneControl® family of motion control systems is ready when you are. The SceneControl Pendant infrastructure is the same as the larger, and more complex, SceneControl controllers. Add hoists and upgrade your controller within the SceneControl family.

Important Safety Features

- Emergency Stop
- Password protection to allow access only to authorized users
- Load sensing capability
- Automatic alarms if an error or fault is detected
- Illuminated GO button
- Hold-to-run function requires the operator to be at the controller when scenery is moving

Order Information

NUMBER	DESCRIPTION
064-SCP-1	SceneControl® Pendant, 1 axis
064-SCP-4	SceneControl® Pendant, 4 axes
064-SCP-8	SceneControl® Pendant, 8 axes
