

Advanced Motion Control in the Palm of your Hands

SceneControl® 12 is an ergonomic handheld mobile control console that allows the operator to move around the stage and see the moving equipment. The 12" touchscreen with a resolution of 1920 x 1200 offers a crisp display to easily interface with individual hoists, targets, presets, or program and run a show.

The SceneControl 12 console starts with the same control software that makes all of the members of our SceneControl family so powerful. You can program an unlimited number of cues, whether the production requires complex cues with many moving battens or synchronized groups of point hoists. The touchscreen display shows the operator the position of each batten and all of the targets.

- Control up to 36 axes
- Change the speed of an axis in motion
- Start/stop an axis multiple times within a cue, or send an axis to multiple targets
- Create motion profiles based on time or speed

The Right Fit for Your Productions

The SceneControl 12 console can serve as a main controller for small to mid-sized productions like high school and college musicals, dance concerts and music performances, or as a secondary controller for larger facilities. It networks easily with other SceneControl consoles, allowing operators to create a system that controls more than 36 axes by adding another controller for larger shows.

Superior Safety Features

Our state-of-the-art algorithms allow operators to define safety zones around equipment. Multi-level security includes user IDs and passwords, as well as four user levels to restrict functions to appropriate operators.

- The included Emergency Stop system can be upgraded to SIL3 rating.
- Illuminated Go and Stop buttons are hardwired and are not part of touchscreen.
- The hold-to-run is integrated in to the ergonomic handle and provides a safe and convenient method of ensuring intentional operation.
- System-critical actions are recorded and saved automatically in a time-stamped event log.
- USB ports allow external network storage of show files.
- Optional load sensing stops the load when it exceeds weight parameters.
- Unique user IDs and passwords give the ability to restrict functions and change user interface

Additional Features

- Networks with other J.R. Clancy consoles
- Load Sensing and Learning
- Joystick with ENABLE button
- Illuminated STOP/GO buttons
- Multi-language capability supports English and two additional languages
- Accepts Western, Russian, Asian and Arabic characters
- Displays data in units of feet/inches, decimal feet, meter or as a percentage

Operating system: MS Windows embedded

Motion Control Software: Raynok for J.R. Clancy

Warranty: Three-Year Warranty against defects in materials or workmanship is provided on all J.R. Clancy equipment. Our warranty is contingent on operation by trained personnel and an annual equipment inspection of a J.R. Clancy authorized technician.

Support: 24/7 factory technical support with additional service and assistance provided by a worldwide network of J.R. Clancy authorized dealers. Inspection and maintenance are available through J.R. Clancy's T.I.M.® (Train, Inspect, Maintain) Program. For more information call 1-800-836-1885 or email service@jrclancy.com.
