

# VANTIS™

WALL CONTROLLER

## The NEW Vantis™ Wall Controller

The new line of Vantis automated rigging controllers offers a higher level of safety, control, precision and intuitive operation to your theatre. The Vantis Wall Controller puts that capability right where you need it.

Variable speed control, multiple targets per machine, unlimited presets, and load sensing capability are some of the features available and accessible on the 10" touchscreen. The simple, powerful, intuitive interface makes it easy to control your stage machinery. You can easily program new presets for up to 24 motorized machines and then tailor permissions on each for a new level of security that protects your equipment and users.

Position Vantis just off stage on a wall or in a rack mount cabinet for convenience and security. When in use, connecting a Vantis Controller Remote Operator Pendant extends your capability to center stage.

# VANTIS™

## Applications

Venues with up to twenty-four motorized machines that need to quickly access stored positions, easily program new presets and tailor permissions based on user.

- K-8 School
- High Schools
- College/University
- Performing Arts Centers
- Worship
