STRATA makes any spot perfect for a tent floor.

TENT FLOORS are a great rental opportunity. The problem is building a tent floor can be time-consuming and expensive. Fortunately, the revolutionary new STRATA Tent Floor System offers a better way.

STRATA is the engineered floor system designed to work with any tent, over any terrain. Leveled or laydown, STRATA can be used anywhere from a flat parking lot to a hillside next to the 18th green — even over a pool.

Ready to go anytime you need it, STRATA is easily installed by a small crew in a fraction of the time of stick-built floors or other “flooring” systems — saving you a small fortune in labor.

So whether you've never done a tent floor before or are simply looking for a faster, more cost effective way to do the job, think STRATA.

The any tent, anywhere, anytime tent floor.

STRATA™
TENT FLOOR SYSTEM

A N Y T E N T

STRATA FITS EVERY TENT YOU RENT

STRATA is an engineered outdoor floor system designed to work with any tent from any manufacturer. The freestanding STRATA tent floor provides exceptional flexibility.

FROM THE SMALLEST TO THE LARGEST

Whether you're erecting a small pole tent or an enormous clearspan structure, STRATA is the perfect floor for any application. Best of all, it does it quickly and cost effectively, too.

Deck surface options are limited only by your imagination. Shown are standard plywood, optional black non-slip & real hardwood dance floor.

Remove any deck to get under the floor to run electrical or duct work or for shoring tent poles.

Rugged aircraft-grade aluminum and powder-coated steel make STRATA exceptionally durable for outdoor use.

STRATA ADJUSTS TO ANY TERRAIN

STRATA is a tent floor system that can be set up on an infinite variety of sites. A sloping hillside? No problem. Over a pool? Bring it on! STRATA even makes installing a laydown floor on a flat parking lot easier!

SINGLE SYSTEM, MULTIPLE FLOORS

STRATA enables you to construct multiple floor types — laydown, leveled and pool covers — from a single, easy-to-install system. The STRATA Tent Floor System is the only one you need.

STRATA Tent Floor System can be...

...a leveled floor that's quick and easy to install over any terrain...

...a laydown floor using low profile beam caps and the same decks...

...a pool cover using the same components as the laydown floor in combination with readily available wood construction joists.

A N Y T I M E

QUICK INSTALLATION CUTS LABOR COSTS

A small crew can set up the STRATA Tent Floor System in a fraction of the time it takes to construct any other leveled floor. As a result, the amount of money you save on labor alone can be substantial.

WORK WITHIN THE TIGHTEST SCHEDULES

Because STRATA installs in hours instead of days, you can work within any client's schedule. It also means you can book more floor rentals because the floor is ready to send out on another job before most other systems have even left the last job!

A small crew can set up the lightweight STRATA System in just hours.

STRATA uses pins to eliminate the time-consuming nuts and bolts typical of other flooring systems.

STRATA has self storing diagonal bracing that provides lateral stability and does not require any tools. STRATA'S diagonal bracing is all you need for floors up to 4 feet (122cm) high.

SET UP

Setting up a STRATA floor

1 Set the main beam in place and level it.

2 Set another main beam in place next to the first.

3 Install spacer beams between main beams.

4 Place decks on top of the framework.

5 Lock decks to main beams.

STRATA MAKES SET UP SIMPLE

Setting up the STRATA Tent Floor System couldn't be simpler. A small crew with less than a half hour of training can easily install an elegant, durable STRATA floor in just a few hours. Whether leveled or laydown, STRATA is quite possibly the easiest tent floor ever.
