

TRANSFORM[®]

MOTORIZED ACOUSTICAL BANNER

Variable acoustic technology in our new acoustical banners!

Wenger's new line of Motorized Acoustical Banners offers the benefits of variable acoustics for performance spaces, including theaters, performance halls, worship spaces, athletic venues and auditoriums. Adding Transform Motorized Acoustical Banners to your performance space allows you to improve the audience experience during every performance. You'll never be more than a few seconds away from transforming your acoustics to best suit your next performance. Transform controls the levels of sound absorption and reflection in your performance space. Each banner includes adjustable spacing options, both for distance away from the wall and between the two fabric layers. Banners deploy quietly and quickly, with a tubular motor designed for operator-controlled or pre-set environments. Wenger's banner system integrates with SceneControl™ by J.R. Clancy and other intelligent control systems.

TRANSFORM[®] MOTORIZED ACOUSTICAL BANNER

Built-in adjustable spacing between fabric layers for fine tuning absorption

Available fabric options include wool serge and velour material

Banners deploy quickly and quietly up to 30' (9 m) long in certain sizes

Finished laminated wood end enclosures in a variety of finishes.
