STRATA® TENT FLOOR SYSTEM

DURABLE, NON-SLIP, WEATHER-RESISTANT EVENT STAGING SURFACE

TENT FLOORS are a great rental opportunity. The problem is that building a tent floor can be time-consuming and expensive. Fortunately, the revolutionary STRATA Tent Floor System offers a better way.

STRATA is the engineered floor system designed to work with any tent, over any terrain. Levelled or laydown. STRATA can be used anywhere from a flat parking lot to a hillside next to the 18th green - even over a pool.

Ready to go anytime you need it. STRATA is easily installed by a small crew in a fraction of the time of stick-built floors or other "flooring" systems - saving you a small fortune in labor.

So whether you've never done a tent floor before or are simply looking for a faster, more cost effective way to do the job, think STRATA. The any tent. Anywhere. Any time tent floor.

A small crew can set up the lightweight STRATA System in just hours.

STRATA uses pins to eliminate the time-consuming nuts and bolts typical of other flooring systems.

STRATA has self storing diagonal bracing that provides lateral stability and does not require any tools. STRATA'S diagonal bracing is all you need for floors up to 4' (122 cm) high.

ANY TENT.

“The biggest benefits of STRATA are the speed of installation and dismantling. It’s also the ease of installation – we don’t need a skilled tradesman, like we do with a stick-built floor.”

Ed Knight
President, EventQuip
Eventquip, Pipersville, PA

STRATA fits every tent you rent

STRATA is an engineered outdoor floor system designed to work with any tent from any manufacturer. The freestanding STRATA tent floor provides exceptional flexibility.

From the smallest to the largest

Whether you’re erecting a small pole tent or an enormous clearspan structure. STRATA is the perfect floor for any application. Best of all, it does it quickly and cost effectively, too.

Quick installation cuts labor costs

A small crew can set up the STRATA Tent Floor System in a fraction of the time it takes to construct any other leveled floor. As a result, the amount of money you save on labor alone can be substantial.

Deck surface options are limited only by your imagination. Shown are standard plywood & optional black non-slip flooring.

Remove any deck to get under the floor to run electrical or duct work or for storing tent poles.

Rugged aircraft-grade aluminum and powder-coated steel make STRATA exceptionally durable for outdoor use.

ANYWHERE.

STRATA[®] TENT FLOOR SYSTEM

STRATA makes setup simple

Setting up the STRATA Tent Floor System couldn't be simpler. A small crew with less than a half hour of training can easily install an elegant, durable STRATA floor in just a few hours. Whether leveled or laydown. STRATA is quite possibly the easiest tent floor ever.

1
Set the main beam in place and level it.

2
Set another main beam in place next to the first.

3
Install spacer beams between main beams.

4
Place decks on top of the framework.

5
Lock decks to main beams.

ANY TIME.

Work within the tightest schedules

Because STRATA installs in hours instead of days, you can work within any client's schedule. It also means you can book more floor rentals because the floor is ready to send out on another job before most other systems have even left the last job!

STRATA Adjusts to any terrain

STRATA is a tent floor system that can be set up on any infinite variety of sites. A sloping hillside? No problem. Over a pool? Bring it on! STRATA even makes installing a laydown floor on a flat parking lot easier!

Single system, multiple floors

STRATA enables you to construct multiple floor types - laydown, leveled and pool covers - from a single, easy-to-install system. The STRATA Tent Floor System is the only one you need.

“The stability of the beams and flooring, the whole engineering of STRATA makes me feel confident about using it different ways, such as bridging over a pool.”

Mike Holland

VP of Operations, Chattanooga Tent Company
Chattanooga, TN

STRATA Tent Floor System can be...

...a leveled floor that's quick and easy to install over any terrain...

...a laydown floor using low profile beam caps and the same decks...

...a pool cover using the same components as the laydown floor in combination with readily available wood construction joists.
