Transcend® Active Acoustic System

• A system using Transcend active acoustic technology designed for the acoustical enhancement of sound for performance venues.
• System includes a series of speakers, microphones, amplifiers, digital signal processing, and a digital audio bus to create different levels of reverberation in performance spaces.
• Transcend digital signal processor provides up to four zones of control and that can be expanded by adding additional processors.
• Each zone contains 4-channel in, 8-channel out Lexicon active acoustic digital signal processing.
• System includes HiQnet communication protocol through Audio Architect for setup, adjustment, and remote monitoring of the system.
• Processor includes speech/music detection setting which automatically and gradually reduces the system reverberance when a speech signal is detected over a period of time and increases reverberance when music is detected.
• Complete turnkey installation can be provided, including all electrical components, system tuning, wiring/mounting of all speakers, microphones, Transcend, other components and equipment rack.
• System requires isolated power transformer and motorized breaker panel, specified by Wenger, supplied by others.
• Three-year warranty.
